Subject: way to get actual axis range

Hi Everyone,

I'm wondering if there is a way to get the actual range of a plot (.ps). For example, if I was to enter `yrange=[0,maxy]`, `ystyle=1` into a plot command, I can't be exactly sure what the actual plotted y range will be. This would be useful to make annotation placements more accurate after the plot command using `xyouts`. Does this variable exist?
