Hi Scott,

I appreciate your help with this.

The only one of these folders that was in the .idl/itt directory was the p2 folder, which I deleted.

When I restarted IDL, I could then get to the connector dialog and I selected the two choices there for the version of Subversion (1.6) I have on my machine. I got the same error message when I installed yesterday (e.g., "something" is missing). So, I deleted the Windows only connector and asked the dialog to carry on. This seems to have installed something, because now I have a repository viewer in my Workbench, etc.

I found an Import button under the file menu, and that lead me to a dialog that asked me to input the URL of the repository, which I did (<http://idl-coyote.googlecode.com/svn/trunk/coyote>).

This has brought me to a Select Resource dialog which shows the URL of the repository, with the Head Revision selected, but the Next button is grayed out! All I can do is go back or cancel.

Going back puts me back in the Enter Repository Location Information dialog with the correct URL selected.

So, not sure what to do next. :-(

Thanks,

David
