David, please try disabling Subversion again, closing the workbench
and deleting the following folders (if they exist):
C:\Documents and Settings\<username>\.idl\itt\features
C:\Documents and Settings\<username>\.idl\itt\idlworkbench-config-
idl8.1.0
C:\Documents and Settings\<username>\.idl\itt\p2
C:\Documents and Settings\<username>\.idl\itt\plugins
and the file:
C:\Documents and Settings\<username>\.idl\itt\artifacts.xml

Then restart the workbench and enable Subversion again.

Sorry this may cause you to lose some 8.1 preference settings but
should reset things enough to fix your Subversion issues. I just tried
these steps on an 8.1 install and it worked for me.
