
Subject: Problem using ReadS to read a long string

I've spent quite a while on this small problem to no avail. I have a long formatted string that contains data that I need to access. Unfortunately, when I try to format it with ReadS, I always get an "end of input data encountered" error.

The strings look like this:

```
pg0953_ 0.36250 Lya -28 34108673 1108673 1 11 4 11 2  
65.7 13.0 73.4 13.9 e140m 18.8 6.2 13.305 0.101 -0.073 13.324  
0.078 -0.078 f0
```

And I'm using the following line of code to read it:

```
reads,input,root,z,ion,vthing,vaod,dvaod,vfit,dvfit,baod,dba od,bfit,dbfit,waod,dwaod,  
$  
wfit,dwfit,chan,wmin,snres,lnaod,dlnpaod,dlnmaod,lfit,dlnpf it,dlnmf fit,flag,  
$  
format='(A,F,A,I,I,I,I,I,I,I,F,F,F,F,A,F,F,F,F,F,F,A )'
```

I've never had to use ReadS before, so I'm wondering if I'm making some really simple mistake about how it works. Any ideas?
