
Subject: IDL Way to Remove Rows of an Array

Folks,

I have other things demanding my attention this morning,
so I thought I would offer an IDL challenge. What is
the IDL Way to remove arbitrary rows of an array?

For example, suppose I have this array:

```
array = Indgen(3,6)
print, array
```

```
0    1    2
3    4    5
6    7    8
9    10   11
12   13   14
15   16   17
```

What is the IDL Way to remove rows 2 and 5?

```
subarray = ???
print, subarray
```

```
0    1    2
6    7    8
9    10   11
15   16   17
```

Cheers,

David
