Although, I should point out that I did manage to get
my Coyote directory installed in IDL 8.1 in this way.
But, when I went through the identical steps to get
my Catalyst directory installed, IDL went into some
kind of tail spin when it tried to make a project out
of it. I let it churn for a couple of hours before I
killed the process.

I haven't tried it again this morning, as I'm trying
to get some work done and I always use IDL 7.1.1 for
that. :-)

Cheers,

David
