Subject: Zoom in plot
Posted by Haje Korth on Fri, 13 May 2011 15:15:29 GMT

Hi,
I want to use the new graphics system so badly, but I run into all
these problems I am not used to. For example, I could not find a
magnifying glass in the plot window in IDL 8.1. Isn't there a simple
way to zoom into a plot? I tried mouse with usual key combinations
(ctrl, shift, alt) to no avail. The post v6.4 help system has become
so difficult to use that I have a hard time finding any of this
information in the help system.

Please please please anyone help or let me know that I am asking for
way too much...

Thanks,
Haje
