Subject: IDL 7.1 to 8.1, workspace migration

Is there a recommended strategy for migrating a 7.1 workspace to an
8.1 workspace? I opened my newly installed 8.1 and pointed it at my
7.1 workspace. Things "appear" to more or less be functional and my
7.1 projects are listed in the project pane. I'm just wondering if
there is something else I should do. For example, are my 8.1 IDE
capabilities limited in some way by pointing at an older workspace?
