Hi,

I have got a small problem with the polyfillv function in PVWAVE.

This is what happens:

```
WAVE> print,polyfillv([8,6,5,7,9],[4,5,5,4,4],11,11)
% Internal error: POLYFILL, no points made.
% Execution halted at $MAIN$ (POLYFILLV).
```

Does anybody know a workaround for this error?

By the way the same command in IDL leads to:

```
IDL> print,polyfillv([8,6,5,7,9],[4,5,5,4,4],11,11)
      50
```

Thanks,

Udo
