Subject: How to plot multiple cgContour plots using the same colour levels (but containing differing data)

Hi all,

I have 3 x 3 cgContour plots on one page. I would like the colour scale in each of the plots to be the same to facilitate inter-plot comparison of the data (and to only require one color bar also). I know the min/max values for all datasets, so I was hoping there's a simple way to tell cgContour that for plot X, expand the colour scale to include the supplied min/max values. That however appears not possible. Am I missing something?

Cheers

- Balt
