So only do it when you're on those plots... which in this case, is when nt is 18 or 19. Or more generally:

```
on_bottom_line = (nt / !p.multi[1]) eq (!p.multi[2] - 1)
if on_bottom_line then format='(A1)' else format=""
plot, ....., xtickformat=format, ....
```

-Jeremy.
