Is it possible that cgHistoplot can plot two distributions on a same histogram plot? How?

This is how my data is

Range	Dist A	Dist B
0.0-0.1	3	1
0.1-0.2	5	2
0.2-0.5	10	16
0.5-1	5	2
1-2	1	1
2-5	3	0

I need to plot Dist A and Dist B side by side in a same histogram plot.

Thanks.
