Hi all,

I am plotting histograms using histogram with /FREQUENCY. In addition I am overplotting other data. When I set the xrange, the yrange is automatically set to [0,1] instead of [0,ymax]...and I have no idea about how to access ymax.

As I have to do the histograms for several datasets, I wish to set a general way to define the xrange and yrange nicely, so that I don't have to do it by hands for each dataset. Any suggestion about how to do that?

Thanks in advance!
