mgunit 1.2 is ready for download at:

<http://mgunit.idldev.com/wiki/Downloads>

This is not a very exciting upgrade, but offers some nicer documentation. Here's the new features:

1. Added FAILURES_ONLY keyword to display only failed tests.
2. Simplified and improved user-level API documentation.
3. Added VERSION keyword to report mgunit version.

Maybe this is just a reminder that if you are not testing your code, you don't know if it works!
