The TARGET keyword is key. Please try this:

```
x = findgen(10)
y1 = x
y2 = -x
p1 = plot(x, y1, 'r', axis_style=1)
p2 = plot(x, y2, 'b', /current, axis_style=0)
a2 = axis('y', target=p2, location=[max(p2.xrange),0,0], textpos=1)
```

You'll likely want to play with the MARGIN keyword to give room for the second y axis title.
