Thank you for suggesting the books Konstantinos.I will go through them.

David, I have the following

As you have mentioned, I do see a tiny sliver of the images in the upper left quadrant of the display window. Surprisingly, the program is running multiple times and gives the same output without any compilation errors.

When I load a single image (.png, 2216 X 1254 resolution) using the following procedure,

```
imageFile = dialog_Pickfile(filter='*.png')
image = read_image(imagefile)
tv,image,TRUE=1
end
```

I see an output in the display window containing the bottom 70 % of the image.

Any suggestions? Thank you.
