Hi Paulo,
thanks for your fast reply.

> I should have mentioned that this program is to do multiplot-like
> pages, that is, where the plots have no space between them, sharing
> the axes

Yep, this is not exactly what I would need: my plots have different
axes, and I would need a space in between..

> Otherwise, the standard functionality of the graphics
> functions can do it (with the keywords layout or position).

Could you please detail this? My understanding is that by setting !
P.Multi, one can only have plots of the same size.
Are you saying that there is a fonctionality (shame on me, but I
ignore its existence) allowing to play with the size of the plots ?

Alex
