
Subject: Bo knows IDL? No, but VAX/DEC LSE does

(LSE is a Langage Sensitive Editor implemented on DEC's VAXes, and AXP machines. It has the feel of EDT, but is more powerfull, and extendable)

I have written templates for IDL's general statements and program constructs (i.e. stuff in chapter 6 of IDL V.2 manual PRO, FUNCTION, IF, CASE, etc).

Consider the release to be a beta version in that most bugs are fixed but some problems remain with the alignment and indentation of some statements.

Drop me a note if you want the LSE file for IDL. Feedback regarding bugs is welcome, but please no LSE questions. Manuals are for that.

I will not implement IDL functions and procedures (too many of them)

It would be great if IDL folks would take a look at LSE, as it offers more: access to help files for the language, program compilation within the editor, with compilation errors review, Source Coude Analyzer software that can help in maintenance of large codes.
