
Subject: undefined variable errors...?

I have run into this problem using widgets in 3.0.0. The following error occurs at certain times:

```
% Variable is undefined: <UNDEFINED>.
```

```
% Execution halted at XIDR_EVENT <xidr.pro( 413)> .
```

Line 413 starts the case-statement in the event-handler.

I know several have this problem with IDL 2.4 -->

Are there some solutions to it or if NOT are someone trying to correct it?

It (the bug) was already detected back in ver.2.4 !!

Andreas
