After installing IDL 6.0 on a Windows 7 operating machine and putting in the permanent licence, when running it get:

"

IDL Version 6.0, Microsoft Windows (Win32 x86 m32). (c) 2003, Research Systems, Inc.

% LICENSE MANAGER: Terminal Server remote client not allowed

Feature: idl

License path: C:\RSI\license\license.dat;C:\RSI\license*.lic

FLEXIm error: -103,577. System Error: 2 ""

For further information, refer to the FLEXIm End User Manual, available at "www.globetrotter.com"..

License file: C:\RSI\license\license.dat;C:\RSI\license*.lic

"

after which it reverts to the 7 minutes of demo, where i can successfully run programs, but only for this limited period of time. The licence i have is one personal one and works for any XP machine. I'm quite happy with IDL 6.0 and cant really afford the outlay for the latest version of IDL.

Any suggestions about how i get IDL 6.0 working on Windows 7?

thank you,
Neil
