Hi all,

Today, I just changed the position of my laptop with respect to my
monitor (from left side to right). So far, nothing special, just have
to change the display setting in the preferences (oh, by the way, it's
a MacBook Pro)
Then I got in trouble with IDL that no longer want to create windows
larger than my laptop size (1024) but suitable for the monitor (1440).
Looks like the size is now limited to 1006 pixels! How did I changed
that, I have no idea !!
It was working before and I have no idea what happens neither how to
fix that.

Any thoughts ?

Thanks
Sebastien
