Bill,

ITTVIS support indicate they are unwilling to assist in getting the  
licence to work on Windows 7 as IDL 6.0 was not designed for this  
operating system, suggesting i should purchase the latest version of  
IDL. Well installation of IDL 6.0 works fine under Windows 7 and so do  
the programmes, it's just that the licence thinks i'm trying to

operate remotely, which i'm not. The licence i have is a personal one and should work on any machine i have the use of.

Others must have enconted such a difficulty i'm just wondering if they might share a solution.

thank you,  
Neil
