I want a contour plot over a whole world map (-180 to 180, -90 to 90). I am using idl 4.0 which gives bad results on any plot I give it where a contour line crosses a plot border. I tried a fake surrounding ring of negative values around the borders of my array in hopes that would solve the problem but I had no longitude to give it since REAL data extended to -180 to 180. On the FAQ they talked about this a little, seemed to say the problem was solved but things sure don't work for me

please reply to lamm@met.fsu.edu
