Hello folks,

I am trying to make a series of images with IDL for my simulations. After exploring the new IDL graphics system and the coyote graphics for over 3 hours, I still don't get a good concept of how to do it.

So, here is a sketch of what I am after:

<http://dl.dropbox.com/u/38390926/idl.jpg>

In the sketch, the simulation is basically a color-scale image of current density in the 2D simulation plane, which moves along the z-axis as the simulation goes.

Can anyone help me with this, please? I really appreciate it.
