Subject: Can IDL receive messages from dlls using call_external
Posted by rohit bhat on Thu, 25 Aug 2011 17:45:33 GMT

Hi,

I was trying to implement a code where a C# program passes a value to
IDL through a .dll file. Is there anyway I can program in IDL so that
it receives something, instead of sending?
For example, If I type in 'abc' in my C# application and hit on send;
That should send a call to IDL and then IDL should display that or its
address.

In short, can IDL be made a listener?

Thanks,
Rohit
