
Subject: Open a specifically-sized cgWindow

Hi all (particularly David who may well answer this question),

I would like to open a cgWindow which is a specified size, but I can't work out how to do this. I can't see anything in the docs, and trying things like an XSIZE and YSIZE parameter doesn't seem to do anything.

Is there a way to do this? I'm pretty sure there would be, I just can't seem to find it!

Cheers,

Robin
