Yun,

Hi there, that was me who posted that problem. It would be excellent if you could also file a bug report with ITTVIS. I continue to be told it will be fixed in the next version, but they don't have a work-around in the mean time. I've begun the work-around of not using IDL for my NETCDF work, which is becoming more and more of the work I must do. It would be helpful for this problem to be solved and if I'm not the only person having the issue it might help actually get it solved.

Thanks,
Matt
