Hi David,

I have noticed the same, since I was in the same situation (2 images 1 plot with the same colorbar).

If you look into "IDLitVisColorbar__Define" you can see that a colorbar can only be attached to *one* image. And the data will always be scaled between 0 and 255, which is also not very helpful if the colortable has only e.g. 100 colors. I ended up using direct graphics for my plots :/

Cheers,
Sebastian
