Hi all,

I need to create a matrix of 2 dimensions in IDL and to save in file .sav

I know that in IDL command line is: mat=dblarr(2, 4) ....that's correct?

But in the interface graph i don't really know....i did so:

PRO cria\_mat

mat=dblarr(2, 2)

OpenR, lun, 'C:\Documents and Settings\Projeto\_Estudo\mat.sav', /  
Get\_lun

mat = dblarr(file\_lines('C:\Documents and Settings\Projeto\_Estudo  
\mat.sav'))

ReadF, lun, mat  
close, lun

writeu, unit, mat

print, mat

help, mat

close, unit

END

Can you help me, please?
