I'm using Ghostview to preview color postscript images before sending them to a printer. I'm creating the images in IDL (version 3.0.0 sunos) and using the following command to open the postscript device:  
device,filename='image.ps',/LANDSCAPE,/COLOR,yoffset=25.,xsi ze=21.3,ysize=16.

When I look at the images using ghostview 1.1 they are upside-down. Any suggestions?
