Subject: Error in IDL
Posted by shaheda shahi on Fri, 21 Oct 2011 16:37:34 GMT

Hi,
    I get the error in running the program as "Attempt to call
undefined procedure/function".
So, I have added the path of the program to the default path using '!
path'. Even it gives the same error. I tried 'resolve_all' command
also. It says that '
% Compiled module: RESOLVE_ALL.
% Attempt to call undefined procedure/function: 'DEFAULT'.
% Error occurred at: RESOLVE_ALL_BODY 290 /usr/local/itt/idl71/lib/
resolve_all.pro
%   RESOLVE_ALL   351 /usr/local/itt/idl71/lib/
resolve_all.pro
% $MAIN$
% Execution halted at: $MAIN$

So, what can I do in this case? Should I need to add the default
routine in the library?
Please help me out.

Thank you.
