Subject: Resizing a widget base

Hello,

  Has anyone used the TLB_SIZE_EVENTS keyword on a call to widget_base?
I'm using it on NT4, and it returns ALL (a time history I think) of the
resize events. From the beginning of the mouse movement to the end.
(Which can be fun to watch the first couple of times.) All I really
want is the last position. Do all the Window
platforms return all the events? Does anyone know how to get just
the last event triggered?

Thanks,

Ken
