Subject: Add a new variable to netCDF file?

So, I know how to overwrite a variable in a netCDF file, but how do I
add a new one?

I have a netCDF file with about 30 variables and I want to add two new
ones. It would be a pain to have to copy over all 30 vars plus the
new ones into a new file, so is there a way to add variables using the
netCDF operators? I've been experimenting but haven't been able to
find a way to do it (when I try to write a new variable to the file,
it complains that it can't find the variable, which implies it's
looking to overwrite an existing one rather than tack on the new one).

Thanks!
