Do something like this:

```
; Create some data.
```

```
x = findgen(100)
theta = x/5
curve = Sin(x/5) / Exp(x/50)
```

```
; Create initial plot with non-log data. Don't draw right Y axis.
```

```
PLOT, curve, YSTYLE=8
```

```
; Create a log Y axis. Save the new axis scaling.
```

```
AXIS, YAXIS=1, YLOG=1, /SAVE, YRANGE=[0.1, 100]
```

```
; Overplot the log data.
```

```
OPLOT, x, theta
```

That should do it!

David
