It worked for me when I changed the C_FILL_PATTERN argument to an array like this:

```
c=contour( ... C_FILL_PATTERN = [pattern] ... )
```

It's a case where you have to read the documentation quite literally.

C_FILL_PATTERN

Set this property to an array of IDLgrPattern objects representing the patterns to be applied at each contour level if the FILL property is non-zero. If there are more contour levels than fill patterns, the patterns will be cyclically repeated. If this property is set to 0, all contour levels are filled with a solid color (this is the default).
