
Subject: Overlaying multiple plots on top of map

Hi,
I am trying to figure out how to overlay multiple plots on top of a map. To be specific, I would like to display a wind rose in a number of locations. To do this, it seems like I have to first establish the map projection and then create separate plots at various locations of the map. Using plot,/noerase lets me overplot onto of the map, but I can't figure out how to control the position. I've thought about just generating the wind roses separately and then inserting them as bitmaps into an image of the map, but that seems a bit clumsy.

An example for what I'm looking to do is here: <http://www.ipcc.ch/graphics/syr/fig2-5.jpg>

Any suggestions

Thanks
Axel
