Now I am guessing you changed the keyword on the first command
in that series from WINDOW, which you had before, to ADDCMD.

The WINDOW keyword will either replace all the commands in
a window, if a window exists, with a particular command,
or create a window and add the command to it. Subsequent
commands are added with the ADDCMD keyword. If you
need a window, you can always create one by typing cgWindow.

There is a whole book on the subject if you need further
direction. :-)

Cheers,

David
