Subject: Starting idl quietly
Posted by Martijn Dashorst on Tue, 07 Jan 1997 08:00:00 GMT

Hi!

I was wondering if it is possible to start IDL quietly. I start
IDL from within a c-program using a pipe and nomatter what I
tried to do, IDL messes up my terminal window...
I tried: fp=popen('idl > idl.txt','w') but that doesn't do the
trick, and I couldn't find any startup options which would
disable the startup message....

Thanx...

Martijn
