Hi,

I am pretty new to idl but have experience in other languages. I am working on a very large program originally created in idl 7, but I am working in idl 8.0.1. The following has been simplified from the program and produces an unusual error

```
% Stepped to: ENVI_REAL_MAIN_BASE % WIDGET_CONTROL: Invalid widget identifier: 17.
```

This error persists when the problematic portion of code is isolated as below. I have included the entire error message. Any suggestions to my ignorance or ways to overcome/fix this problem.

```
pro testt
compile_opt idl2
  envi, /restore_base_save_files
  envi_batch_init
```

End

Thanks
David Birkigt

Producing

```
ENVI> testt
% Compiled module: TESTT.          3 C:\Users\Documents\Car\Code
\testt.pro
% Stepped to: ENVI
% Stepped to: ENVI
% Stepped to: ENVI
% Stepped to: ENVI_REAL_MAIN_BASE
% WIDGET_CONTROL: Invalid widget identifier: 17.
% Execution halted at: ENVI
```

```
%           TESTT      3 C:\Users\Documents\Car
\Code\testt.pro
%
$MAIN$
ENVI>
```
