Folks,

It has come to my attention that some well-used Coyote Library routines appear to be "missing" from recent updates to the coyoteprograms.zip file. In fact, they are there, but have been saved in a compression format that isn't recognized by some upzip programs.

This has happened to me before, but I didn't understand why. I think I am beginning to understand it better now. It appears that whenever I update my PowerArchiver program, which is what I use to save these files, the default compression scheme gets changed somehow to their latest and greatest. Of course, I don't want their latest and greatest, I want their oldest and slowest, so that it is compatible with what people are actually using.

Anyway, now that I know what the problem is, I can be aware of it and try to get it right when I update these zip files.

If you have updated lately, you might want to give it another go. If you haven't updated lately, you REALLY want to give it another go, as many things have changed recently.

I'll have a separate announcement shortly about exciting new features to cglImage that are in this release. But I have to go put my Christmas demeanor on for an early Holiday gathering my wife is dragging me to tonight. The scowling face can be left at home, I'm informed. :-)
