Hi,

I use IDL v7.0 and the built-in procedure legend.

I am trying to make the horizontal lines in legend shorter by using the number keyword, but I realized that it can just increase the length. By horizontal lines I mean the lines you get by specifying the linestyle keyword.

I have also tried to use leg.pro from sterner, but it looks like it doesn't work with the ps device, does it?

any recipe/idea/suggestion?

thanx
