Subject: number keyword in legend
Posted by simona bellavista on Fri, 16 Dec 2011 16:15:14 GMT

Hi,

I use IDL v7.0 and the built-in procedure legend.
I am trying to make the horizontal lines in legend shorter by using
the number keyword, but I realized that it can just increase the
length. By horizontal lines I mean the lines you get by specifying the
linestyle keyword.

I have also tried to use leg.pro from sterner, but it looks like it
doesn't work with the ps device, does it?

any recipe/idea/suggestion?

thanx
