
Subject: What am I doing wrong with `al_legend`?

I'm trying to create a legend with `al_legend`, and I thought i was following all the rules, but I just can't get the symbols in the legend to come up as anything other than whatever symbol I just used to plot the last line of data with.

In this example, `legtxt` is a 8-dimensional string array

```
clrs=['black','red','org5','blue','grn4','orange','violet',' dodger blue']  
sym=[16,16,16,16,16,16,16,16]  
AL_legend,legtxt,psym=sym,color=clrs,pos=[65,0.5],box=0,/WIN DOW
```

(I've also tried "colors" as the keyword instead of "color")

All my symbols in the legend end up as the same color and shape as the command I last used on the plot to overplot data with. What am I missing?

Thanks for any help!
