Hello,

I`m struggling with an image processing problem. I want to load a image data file and want to eliminate all colors except a rgb value which I choose and the background color. The following link should illustrate what I want to do:

<http://www.abload.de/image.php?img=ziel4wo90.png>

I have no problem with loading the image. Also I can read the rgb triplet of each data pixel with the following command

`envi_get_rgb_triplets, Data[i,j], r, g, b` and I can compare them with

the choosen rgb value. My problem is how to change these `rgb_triplets`?

<http://www.abload.de/image.php?img=scrn6ipig.png>

Grettings

Steffen
