Hello Greg,

normally with the List object you have to use the 'FindValue' method :

```
IDL> A = indgen(10)
IDL> B = indgen(10) + 10
IDL> C = indgen(3) + 50
IDL> lis = list(a,b,c, /extract)
IDL> d = l.FindValue(10)
IDL> print, d
      10
```
