Subject: extent of a shapefile from IDLffShape?
Posted by desertdryad on Wed, 28 Dec 2011 22:47:09 GMT

Is there no way in IDL, from IDLffShape, to tell the extent of the
entire shapefile in native projection values?   I mean the entire
shapefile, vs one of its entities. If there is a way to know this,
I'm missing it. Anyone?
