
Subject: textoidl textable postscript symbol

Hi all,

I'm trying to add new symbols that I frequently use to the textable of textoidl. However, I have no idea how to figure out the postscript command of those symbols. For example,

```
[ '\circ',          "%" , string(byte(176)) ] $
```

This line is from textable.pro. The "string(byte(176))" is the postscript code for \circ. So how to get the code? I'm trying to add \per and \par to the table. Hope to get some help here.

Thanks.

Xin Tao
