Excellent, thanks for the timely response Doug.

The breakpoint marker still shows up as invalid when the debugger starts, but at least the breakpoint does catch when the code is called now.

I'm glad this is now working, but my next step is compiling a 64-bit DLM of the same routine. Do I understand correctly that for the 64-bit project I should set the debugger to launch IDL using C:\Program Files\ITT\IDL\IDL81\bin\bin.x86_64\idlde.exe ?
