
Subject: Calling all DLM experts- debugging in MSVC++ 2010

I'm having trouble with the MS VC++ 2010 Express compiler when trying to debug a DLL called from an IDL DLM. I used to be able to use breakpoints in the C code and the debugger would stop on them as expected when running in debug mode.

Lately, when I start the debugger in VC++, all the breakpoint markers turn to empty circles with the message: "The breakpoint will not current be hit. No symbols have been loaded for this document."

I've searched and found dozens of threads on this topic in the general MS visual studio community, but no solutions.

Anyone have any tips for getting debugging breakpoints to work within a DLM? I did have it working before in VC++ 2008 and 2010, but I don't know what's changed.

Thanks
