Hi David

following i tried today. I feel its working properly to plot, two max points from two arrays.

```
MAP_SET, /CYLINDRICAL, 0, 0, /GRID, /CONTINENTS, $  
    TITLE = 'Simple Cylindrical Equidistant'  
A = WHERE(DATA.FIELD14 EQ MAX(DATA.FIELD14))  
B = WHERE(DATA.FIELD15 EQ MAX(DATA.FIELD15))  
OPLOT, DATA.FIELD14[A:A], DATA.FIELD15[B:B], PSYM=2
```

Nothing wrong in this it seems.. :)
